Rainfall moved rapidly northward during the past week, starting the season in some of the camps north of El Fasher in both Sudan and Chad. Seasonal rainfall has pushed into the southern portions of North Darfur. Rainfall totals remain suppressed across the larger region, away from the camps, in Sudan and Chad.

Regional Overview: Transport Corridors

Colored lines representing the Inter-tropical Front (ITF) indicate the average position of the leading edge of heavy rains in Darfur and Eastern Chad during the identified period.

* refers to the long-term average (1979-2007)
Seasonal rainfall will likely continue to move northward during the coming week.

Seasonal rainfall may begin across northern West Darfur and much of southern North Darfur, along with adjacent areas of Chad.

Recent improvements in Sudan and Chad, away from the camps, is likely to improve.
