This poster shows the activities of our research group, “HUMLOG Decision Aid Models for Logistics and Disaster Management (Humanitarian Logistics)”. Currently, the group’s work is mainly devoted to the development of decision aid models in humanitarian logistics and disaster management, but also maintains activity in general logistics. The widest context for humanitarian logistics application is disaster management but it also appears in other contexts, such as the case of humanitarian operations not linked to a specific disaster (World Food Programme, vaccination campaigns) or development projects providing basic services. However, it is in disaster management where the application of humanitarian logistics is more complex and difficult and where more differences with business logistics appear.
