Standard Operating Procedures (SOPs)
Fuel Provision Services
19 January 2015

OVERVIEW
This document provides an overview of the fuel services provided by WFP, how humanitarian actors responding to the crisis in the Republic of Yemen may access these services through the Logistics Cluster, and the conditions under which these services are to be provided.

The objective of these services is to enable responding organisations to establish an uninterrupted supply chain that supports the delivery of humanitarian relief items to the affected population. These services are not intended to replace the logistics capacities of other organisations, nor are they meant to compete with the commercial market. Rather, they are intended to fill identified gaps and provide a last resort option in case other service providers are not available.

These services are planned to be available until 31 December 2016, with the possibility of further extension. The services may be withdrawn before this date in part or in full, for any of the following reasons:

- Changes in the situation on the ground
- No longer an agreed upon/identified need
- Funding constraints

This document will be updated, and services provided may change as the situation evolves and operational requirements develop. Updated versions will be shared on the Yemen operations page (http://logcluster.org/ops/yem10a) and shared via the mailing list.

KEY NOTES TO USERS

I. Any communications, requests, and all documentation related to this service should be sent to: co_yem_fuel@wfp.org.
II. All organisations wishing to utilise the service must sign a Service Level Agreement (SLA) with WFP in order to be eligible to receive fuel through this service.
III. Fuel storage capacity is limited. Service Users must collect their fuel as quickly as possible to ensure sufficient storage space is available to accommodate subsequent re-supply. Limitations on available storage space will restrict the capacity to procure additional fuel and will limit the quantity of fuel available for subsequent allocation.
IV. WFP will make every effort to procure and make available a sufficient quantity of fuel to meet the needs of the services users; however, due to the context WFP is unable to guarantee the quantity of fuel that will actually be made available.
V. WFP assumes no responsibility for fuel that is lost while in storage.

FUEL PROVISION SERVICES

The Logistics Cluster will facilitate access to the following fuel provision services:

- Distribution of fuel (diesel and petrol) on a cost recovery basis – based on monthly requirements and subject to operational constraints (i.e. access, availability, storage):
  - Distribution to take place according to the established Allocation Plan(s)
  - Distribution to take place from dedicated fuel stations in Aden, Hodeidah and Sana’a

www.logcluster.org/ops/yem10a
NOTE: Additional distribution points may be made available depending on need, access and security

HOW TO ACCESS THE SERVICES

- Any eligible organisation (see “Limitations and Conditions of Service” below) wishing to become a Service User must first submit an official Letter of Request (LoR).
  - The LoR should provide an overview of the organisations activities in Yemen
  - The LoR must be signed by the designated Head of the Organisation in Yemen (or a representative with sufficient delegated authority)

- Any eligible organisation (see “Limitations and Conditions of Service” below) wishing to become a Service User must sign a Service Level Agreement (SLA) with WFP:
  - The details of the SLA must be agreed bilaterally between the organisation and the WFP Country Office
  - The SLA must include a completed Focal Point Assignment Form (Annex 1 of the SLA)
  - The SLA must be signed by the designated Head of the Organisation in Yemen (or a representative with sufficient delegated authority)
  - The completed, signed SLA must be returned to the WFP Country Office to be co-signed by the WFP Country Director

- Once the SLA is completed, the Service User must inform the Logistics Cluster of their estimated monthly fuel requirement (petrol and diesel) for each location by completing the Indicative Monthly Fuel Requisition Form.
  - The form must be submitted before the fuel requirements for the organisation may be considered as part of any procurement action, or subsequent allocation plan
  - It is the responsibility of the Service User to update and re-submit the form to the Logistics Cluster if and when the fuel requirements for the organisation change

- Based on the signed SLAs, Indicative Monthly Fuel Requisition Forms, available storage, operational constraints, and commercial availability of fuel WFP will procure a quantity of fuel to meet the estimated needs of the Service Users in a given timeframe.
  - WFP will make every effort to procure and make available a sufficient quantity of fuel to meet the needs of the services users; however, due to the context WFP is unable to guarantee the quantity of fuel that will actually be made available

**NOTE: For these SOPs, whenever reference is made to the “total quantity of fuel procured”, it references only fuel that has been specifically procured by WFP to meet the needs of the Services Users in Yemen.**

- For each procurement of fuel WFP will issue to each relevant Service User (i.e. organisations that have an unmet need for fuel in the corresponding location) a Pro Forma Invoice (PFI) (annex 2 of the SLA) that will:
  - Clearly state the period of time (applied to procurement, not distribution) to be covered by the PFI
  - Clearly state maximum quantity of fuel to be allocated, by location, to the Service User
  - Provide an indicative price (see “Cost of Fuel” below) for the fuel to be allocated to the Service User

**NOTE: WFP will issue PFIs that correspond to single rounds of procurement; distribution of all fuel received to meet the requirements of the Service Users, as a result of each round of procurement will be governed by the corresponding PFIs.**

- The Service User must return the signed and stamped PFI to the WFP Country Office.
- As the fuel arrives at the distribution locations the Logistics Cluster will develop and share with each relevant Service User (i.e. organisations that have returned the signed and stamped PFI) the fuel allocation plan (see “Allocation Plan” below) for that location, for that shipment that will:
  - Confirm the total quantity of fuel allocated to the Service User per location

www.logcluster.org/ops/yem10a
Confirm the actual cost to be paid by the Service User for fuel provided under the Allocation Plan.

- The Service User must proceed with the payment according to the terms outlined in the SLA, and for the amount stated on the Allocation Plan.
- Once confirmation of payment is received by the WFP Country Office a Fuel Release Order Form will be issued to the Service User through the Logistics Cluster detailing the total amount of fuel allocated to the Service User per location.
- To collect allocated fuel from any of the locations, the Service User focal point must:
  - Provide the Fuel Storekeeper at the location with the corresponding signed Fuel Release Order Form
  - Provide the Fuel Storekeeper at the location with an ID card (in line with details provided in the Focal Point Assignment Form)

*NOTE: Fuel may be collected by the Service User focal point in multiple instalments, however a minimum of 200 litres must be collected per instalment.*

- The Fuel Storekeeper at the location will issue the Service User focal point a Goods Receipt Note (GRN), at the time the fuel is collected, confirming the quantity distributed from that location at that time.
- The Logistics Cluster will monitor the total quantity allocated per Service User per location, and the actual quantity distributed per Service User per location.

**ALLOCATION PLAN**

Due to the nature and complexity of the context, the Logistics Cluster is unable to guarantee the quantity of fuel that will be made available:

- WFP will make every effort to procure the quantity fuel required by the Service Users to support the delivery of humanitarian relief items to the affected population.
- Any quantity of fuel listed on the PFI only represents the maximum amount of fuel to be made available to a Service User (for the corresponding procurement action); if WFP is unable, due to operational limitations (i.e. insecurity or lack of access), to position sufficient stock to meet the expected needs in a given location the actual quantity of fuel allocated may be less than the quantity indicated on the Pro-Forma Invoice.
- For each procurement of fuel the Logistics Cluster will determine the maximum quantity of fuel to be allocated to each Service User per location (**the quantity that will appear on the PFI**) by:
  - Establishing the relative requirement for each Service User at each location for the timeframe to be covered
  - Applying the resulting percentage to the total quantity of fuel under procurement for each location

*NOTE: The calculation of the relative requirement for each Service User at each location may be adjusted to account for any uncollected fuel that remains in storage at a given location for the corresponding Service User.*

- For each shipment of fuel that arrives at a location the Logistics Cluster will determine the actual quantity of fuel to be allocated to each Service User (**the quantity that will appear on the Allocation Plan and the Fuel Release Order Form**) from that shipment:
  - If WFP receives the total quantity of fuel procured for a given location in a single shipment/batch, the actual quantity of fuel to be allocated will be in accordance with the quantity indicated in the relevant PFI
  - If WFP receives the total quantity of fuel procured for a given location in multiple shipments/batches, the actual quantity of fuel to be allocated to Service Users will reflect the percentage of the quantity of fuel received at a given location against the total quantity of fuel procured for a given location

*NOTE: In the event fuel is received in multiple shipments/batches the Logistics Cluster will create an allocation plan and will issue separate GRNs for each Service User, for each location, for each shipment/batch.*
COST OF FUEL

Due to variations in the market price of fuel, variations in the currency exchange rates, and the duration of time that passes between WFP issuing of the PFI (at the time of procurement) and the Service User making a payment (upon arrival of the fuel at the distribution location) the cost of the fuel will vary.

- The indicative cost of the fuel may vary from one PFI to another and is based on the cost of the fuel WFP will procure from suppliers (converted if necessary into USD at the UN rate at that time).
- The actual cost of the fuel (shown on the allocation plan) may vary from the indicative cost of the fuel (shown on the corresponding PFI), and is based on the actual cost of providing the service (converted if necessary into USD at the UN rate at that time).

LIMITATIONS AND CONDITIONS OF SERVICES

- Only UN Agencies, International Humanitarian Organisations (i.e. IOM, IFRC, etc.), and International or National Non-Governmental Organisations (NGOs) operating in Yemen are eligible to use this service.
- WFP Fuel Storekeepers will monitor the quality of fuel held in storage at each distribution location, and WFP Procurement will make appropriate arrangements with suppliers to ensure the quality of fuel provided (Any issues with fuel quality should be reported to the Logistics Cluster Coordinator).
- Storage of fuel will result in losses due to evaporation (i.e. breathing/working/standing storage losses); therefore the quantity of fuel from each Allocation Plan that remains available for distribution to each Service User will diminish over time. To balance these operational losses the Logistics Cluster will apply the following:
  o Service Users will have 30 days to collect the total actual quantity of fuel allocated to them under a given Allocation Plan, as indicated on the corresponding GRN
  o Any quantity of allocated fuel that remains in storage for longer than 30 days will be reduced by 1% every 30 days until the entire quantity has been collected by the Service User or lost to evaporation
  o Service Users will be notified regularly notified by the Logistics Cluster of the status of any fuel they have remaining in storage
- WFP assumes no responsibility for storage or transportation and/ or any loss or damage to the goods carried. WFP undertakes the provision of services in good faith and will ensure that the services are carried out with due diligence.
1. Preparing to Use the Service

1.1 – Any organisation that would like to begin using the Fuel Provision Service should submit to WFP an official Letter of Request, addressed to the WFP Country Director.

1.2 – WFP will provide the organisation with a template Service Level Agreement (SLA) to be completed, in discussion with WFP as required.

1.3 – The organisation will complete the SLA, including all annexes (i.e. Focal Point Assignment form), and return the signed document to WFP.

1.4 – WFP will provide the organisation with an Indicative Monthly Fuel Requisition (IMFR) form to be completed.

1.5 – The organisation will complete and return the IMFR form, listing the organisation’s estimated monthly fuel requirements for each distribution location.

2. Supplying the Fuel

2.1 – WFP will procure a quantity of fuel based on: (a) The total estimated monthly requirements from submitted IMFR forms (b) Consideration of any remaining quantity of fuel that has not been collected by the organisation (c) Available storage capacity at distribution locations (d) Access constraints for international shipment and internal transport (e) Commercial availability of fuel.

2.2 – WFP will issue a Pro-Forma Invoice to the organisation, based on the total amount of fuel to be procured and the relative quantity fuel required by the organisation for each location. The Pro-Forma Invoice will show the total quantities of fuel, and the indicative cost of fuel to be made available to the organisation at each distribution location.

2.3 – The organisation will review the Pro-Forma Invoice, resolve any issues in discussion with WFP, and return the signed and stamped document to WFP.

3. Allocating the Fuel

3.1 – WFP will make arrangements for the fuel to be delivered to the distribution locations. Depending on operational constraints, the procured fuel may be transported in batches or all at once. WFP will maintain regular communications with the organisation concerning the delivery of fuel.

3.2 – WFP will develop an Allocation Plan for a given location when the fuel arrives (either in total in in part), and will communicate to the organisation the quantity to be allocated and the total cost for the quantity to be allocated.

3.3 – The organisation will confirm to WFP that they accept the Allocation Plan for the given location and will make arrangements to pay the total cost for the quantity of fuel to be allocated.

4. Distributing/Collecting the Fuel

4.1 – WFP will issue a Fuel Release Order Form (FROF) for the quantity of fuel to be allocated to the organisation for a given location once the receipt of payment has been confirmed.

4.2 – The organisation’s designated focal point must present the FROF and appropriate identification documents to the WFP Fuel Storekeeper at the corresponding distribution location in order to collect allocated fuel.

4.3 – The WFP Fuel Storekeeper at a given location will issue and sign a Goods Receipt Note (GRN) to the organisation’s designated focal point noting the quantity of fuel collected.

4.4 – The organisation’s designated focal point must co-sign the GRN to acknowledge receipt of the indicated quantity of fuel.
