ACKNOWLEDGEMENTS

The Ministry of Disaster Management Affairs and Public Events would like to extend its gratitude to all government ministries, departments and agencies, UN agencies, the Malawi Red Cross Society (MRCS) and Non-Governmental Organizations (NGOs) for their participation in the development of the Malawi National COVID-19 Preparedness and Response Plan.

The Government of Malawi wishes to acknowledge, with gratitude, various stakeholders and institutions for their commitment and contributions in the development of the plan. In particular, special thanks go to the cluster leads and co-leads for their special dedication towards development of the plan.

The Government would also like to acknowledge the United Nations Resident Coordinator’s Office (UNRCO) and World Health Organization (WHO) for the guidelines that assisted the Health Cluster to develop a robust plan.

EXECUTIVE SUMMARY

The Government of Malawi, in fulfilling its primary role of protecting the lives of its vulnerable citizens during disasters and reducing their exposure to risk through preparedness, led the development of a National Coronavirus Disease (COVID-19) Preparedness and Response Plan. Malawi recognizes the serious threat that the on-going COVID-19 global outbreak poses on the country. Global movements and interaction between Malawi and affected countries through travel and trade. Additionally, the novel Coronavirus has been confirmed in several countries outside China which have relations with Malawi. Affected countries are putting in containment measures to control the spread of COVID-19. Countries not yet affected, including Malawi, are also ensuring preventive measures against importation of the disease.

The plan has been developed to establish operational procedures for preparedness and response to COVID-19 based on risks identified by the Ministry of Health (MoH) and the World Health Organization (WHO) and other emerging context-based criteria.

This multi-sectoral plan aims to ensure prevention of COVID-19 spread into the country, preparedness and readiness for a timely, consistent and coordinated response in the event of COVID-19 outbreak.

The Preparedness and Response Plan is based on three scenarios- when there is no COVID-19 case, when a COVID-19 case is confirmed (an imported or sporadic case) and when more people are affected by COVID-19 either as clusters or with community transmission.

The plan was developed through the cluster system approach led by the Ministry of Disaster Management Affairs and Public Events and the Ministry of Health. There are 10 operational clusters in the plan namely: Health, Inter-cluster coordination Protection and Social Support, Water, Sanitation and Hygiene (WaSH), Education, Food Security and Transport and Logistics. The following have been included as ad hoc clusters: Communication Cluster, Economic Empowerment Cluster and Enforcement Cluster. The Government of Malawi (GoM) through the Ministry of Disaster Management Affairs and Public Events is responsible for the overall coordination while the Ministry of Health is the technical lead for implementation of the plan.
1.0 INTRODUCTION

1.1 Country Profile
Located in sub-Saharan Africa, Malawi is a landlocked nation bordering Tanzania to the north, Mozambique to the east and south, and Zambia to the west. The country has an area of 118,500 sq km, of which one-fifth is water surface, largely dominated by Lake Malawi. According to UN projections, the country’s population in 2020 is 18,932,282 and predominantly live in the rural areas (85%). The country is divided into 29 health districts located in three geographical regions; Northern, Central and Southern.

1.2 Health
The Ministry of Health provides about 70% of the health care services in the country. The services are categorized as promotive, curative and preventive and these are currently provided at four levels: community, primary, secondary and tertiary facilities.

1.3 Points of entry
Malawi has ten (10) main points of entry. These include two (2) international airports; Kamuzu International Airport in Lilongwe and Chilika Airport in Blantyre. The eight (8) main formal ground crossings include: Songwe in Karonga, Mbirima Border in Chitipa, Mwami Border in Mchinji, Biriri Border in Ntcheu, Dedza Border in Dedza, Mwanza Border in Mwanza, Mlodza Border in Mulanje, Chiponde Border in Mangochi and Marka Border in Nsanje. All these points of entry have established port health services. However, these port services are facing serious challenges in terms of inadequate staff, lack of holding rooms and quarantine structures. Of the ten points of entry, only Kamuzu International Airport has a holding room and quarantine facilities which need to be renovated. The quarantine facility at Chilika Airport is small and does not meet the required standards. All the eight formal ground crossing points of entry have no holding room nor quarantine facility. In addition to the ten formal points of entry, Malawi has extensive porous borders with Mozambique, Zambia and Tanzania.

1.4 Travelers from COVID-19 Countries
Malawi receives about 1200 international passengers at the two international airports on a daily basis. A significant number of these travelers are mainly from the countries hit by the coronavirus outbreak. Travelers from countries with ongoing transmission also pass through the two airports, hence any suspected or confirmed case on these conveyances poses a major risk of exposure to these travelers. Additionally, the ground crossings connect to countries that have confirmed cases.

1.5 Plan Development Process
The COVID-19 Preparedness and Response Plan was developed as a collaborative effort and consultative process under the guidance of the Ministry of Disaster Management Affairs and Public Events, and Ministry of Health through the national cluster system, which is composed of
members from government ministries and departments, UN Agencies, NGO, Malawi Red Cross Society and other humanitarian actors.

There are 10 operational clusters: Health, Inter-cluster coordination; Protection and Social Support, Water, Sanitation and Hygiene (WaSH), Education, Food Security and Transport and Logistics. The following have been included as ad hoc clusters: Communication Cluster, Employment and Labour Force Protection, Economic Empowerment Cluster and Enforcement Cluster. All clusters are required to align their preparedness and response interventions to this plan’s strategic objectives.

These clusters have mainstreamed monitoring and reporting into their activities to track preparedness and response activities. The purpose of this is to enable government to be informed of progress, existing capacity and resource gaps with respect to the response, as well as to generate information for resource mobilization. It also enables clusters to fulfil their accountability responsibilities. Inter-Cluster Coordination is therefore crucial by ensuring that the activities of all clusters are coordinated, monitored and evaluated.

The Protection cluster is cross cutting and its activities have been mainstreamed across all clusters. The plan recognizes people with special needs like the elderly, people with disabilities, chronically ill, PLWHA, injured persons, adolescents, pregnant and lactating women and children as particularly vulnerable and needing special protection measures.

1.6 OBJECTIVES
The main objective of this COVID-19 Plan is to prevent, rapidly detect and effectively respond to any COVID-19 outbreak thereby reducing morbidity and mortality in the country.

Due to the evolving nature of the novel coronavirus, the Preparedness and Response Plan will be updated every 3 months or on a need basis.

1.7 Cluster Requirements
Specific cluster targets are outlined in respective cluster preparedness and response plans. The following table (1) outlines overall financial requirements for each cluster.

² Medium Term includes response activities
³ Long Term includes early recovery activities
2.0. HAZARDS, SCENARIOS, RISK AND CAPACITY ANALYSIS

2.1. Coronavirus disease, COVID-19 (the hazard)

Coronaviruses belong to a large family of viruses causing a wide spectrum of illness, ranging from very mild i.e. Common cold to severe illness such as Middle East Respiratory Syndrome (MERS-CoV) and Severe Acute Respiratory Syndrome (SARS-CoV). Numerous other coronaviruses circulate among animals, including camels and some bat species. Rarely, some animal coronaviruses can evolve to cause illness in people. Sometimes coronaviruses may develop the ability to spread from person to person, for example MERS-CoV which was first reported in Saudi Arabia in 2012, and the SARS-CoV, first recognized in China in 2002. The COVID-19 is a new strain that has not been previously identified in humans.

2.1.1 Transmission

Coronaviruses are zoonotic, meaning they are transmitted between animals and people. Detailed investigations found that SARS-CoV was transmitted from civet cats to humans and MERS-CoV from dromedary camels to humans. Several known coronaviruses are circulating in animals that have not yet infected humans. The actual source of the COVID-19 has not been established but is suspected to have been transmitted from snakes to humans.

The novel Coronavirus is transmitted from human to human through droplets and direct or close personal contact with an infected individual. There is no evidence of airborne transmission in the community. There is no evidence of maternal fetal transmission as only one woman infected with the novel Coronavirus delivered a coronavirus-free baby.

Health-care workers have frequently been infected while treating patients with suspected or confirmed novel Coronavirus. This has occurred through close contact with patients when infection control precautions are not strictly practiced.

2.1.2 Signs and symptoms

Novel Coronavirus signs of infection include respiratory symptoms, fever, cough, shortness of breath and breathing difficulties. In more severe cases, infection can cause pneumonia, severe acute respiratory syndrome, kidney failure and even death.

Laboratory findings include low white blood cell particularly lymphopenia. Typical chest radiograph of COVID-19 patients shows bilateral ground glass appearance and sub segmental consolidation.

The incubation period, that is, the time interval from infection with the virus to onset of symptoms is up to 14 days, but this may be subject to change as the disease evolves and new information is discovered. People are infectious when they are showing symptoms of the disease and very few cases have been identified in people who have mild symptoms amongst their very close contacts.

2.2. Situation of novel Coronavirus Outbreak

The current novel Coronavirus outbreak was alerted to the World Health Organization (WHO) China Country Office on 31st December, 2019 as cases of pneumonia of unknown cause
detected in Wuhan City, Hubei Province of China. On 7th January 2020, the causative pathogen was identified as a novel coronavirus (COVID-19). The majority of these cases were linked to a seafood, poultry and live wildlife market in Wuhan City, suggesting that the novel coronavirus has a possible animal origin. The novel coronavirus infection continued to spread within China with exportation to other countries.

2.3. Risk of novel Coronavirus outbreak in Malawi
WHO risk assessment shows that risk of spread from the epicentre, Wuhan; to other parts of China the Asia region and the rest of the world is very high. In terms of risk for African countries, WHO has identified 13 countries with direct link with China and high volume of travel between these countries as Priority 1 countries at risk of novel Coronavirus. The countries are: Algeria, Angola, Cote d’Ivoire, the Democratic Republic of the Congo, Ethiopia, Ghana, Kenya, Mauritius, Nigeria, South Africa, Tanzania, Uganda and Zambia. There are 7 countries in priority 2. Malawi is among the Priority 3 countries with very low risk of COVID-19 outbreak. However, Malawi borders 2 of the priority 1 countries and has direct flight connections to these countries hence there is still a risk of passengers from very high risk going through the direct entry ports like Ethiopia, Kenya and South Africa, asymptomatic and developing symptoms during or after passing through Malawi port of entries (PoE). The plan is therefore, critical to guide the development of strategies for prevention, preparedness and response in the event of novel coronavirus outbreak in Malawi.

2.4. Scenarios and Planning Assumptions
The Preparedness and Response Plan is based on three broad scenarios: The response levels are also categorized into 4 pillars: community, points of entry, health facility and infectious disease treatment centres. Table below summarizes the scenarios, descriptions and planning assumptions and risk analysis.

<table>
<thead>
<tr>
<th>Scenario</th>
<th>Description</th>
<th>Planning Assumptions</th>
</tr>
</thead>
</table>
| 1        | Preparedness-No confirmed Case | - National surveillance systems are able to detect and respond rapidly to an outbreak, and links to Reference Laboratories are strong and well-functioning.  
- The disease will primarily hit urban and peri-urban areas and is unlikely to spread rapidly in rural areas. However, in localized areas the consequences for people’s livelihoods and food security are significant.  
- The Government of Malawi, and its development partners, is responsible for national; prevention, mitigation and preparedness including capacity building, procurement of materials and establishment of treatment centres.  
- Other UN agencies are responsible for assisting in preparedness for possible humanitarian consequences of an outbreak. |

At this level, the main aim is to:
<table>

|          |                                                                              | o Identifying and designating Isolation facilities  
|          |                                                                              | o build capacity (refurbishment of Infectious Disease Treatment Centres, training of health workers on case management, IPC practices)  
|          |                                                                              | o raise public awareness to the general public and community engagement among workers at points of entry  
|          |                                                                              | o Screening for Coronavirus  
|          |                                                                              | o Investigations for Coronavirus disease  
|          |                                                                              | o Coordination activities with relevant multi-sectoral stakeholders for response.                                                                                                                                 |
| 2        | Confirmed case-Enhanced preparedness in high risk locations (districts/cities with entry points) | • Virus spreads quickly but is limited to a small number of specific areas in Malawi.  
|          |                                                                              | • Initial human-to-human transmission may be highly localized but can easily escalate if containment measures are inadequate.  
|          |                                                                              | • Severe infection will be high amongst the elderly population and those with underlying conditions and compromised immunity, and mortality rates will be high among this population.  
|          |                                                                              | • Many staff will not be able to report to work in affected regions.  
|          |                                                                              | • Non-attendance rates may be 30% for a period of six weeks. Essential services and governance, law and order will deteriorate within the affected areas.  
|          |                                                                              | • The main aim is to manage and contain the case to prevent further spread of the disease. The level also aims to promote the adoption of preventive measures and increase public awareness and engagement including risk communication. |
| 3        | Confirmed Case in multiple locations (urban/semi-urban) or overwhelming numbers of cases | • There is rapid spread of the disease among the general population of Malawi with high infection rate.  
|          |                                                                              | • A significant proportion of staff are not able to report to work.  
|          |                                                                              | • Essential services, governance, law and order will deteriorate within the affected areas.  
|          |                                                                              | • The main aim is to manage and contain the case to prevent further spread of the disease. The level also aims to promote the adoption of prevention measures and increase public awareness and engagement including risk communication. |

### RISK ANALYSIS

<table>
<thead>
<tr>
<th>Factors</th>
<th>Degree of Risk</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Probability</td>
<td>Likely</td>
<td>International travel with presence of international airports, other point of entries and the volumes of people travelling from the very high risk transmission areas as well as local transmission.</td>
</tr>
<tr>
<td>Consequences</td>
<td>Major</td>
<td>Severe consequences to lives, livelihoods and service delivery as well as governance, law and order. There may be need for strong preparedness measures by relevant stakeholders including communities and citizens.</td>
</tr>
</tbody>
</table>

**Overall Risk**

- **Category 1**: Lilongwe, Blantyre, Mzimba, Mangochi
  - Districts have international airports with potential of daily passengers from COVID-19 affected countries
- **Category 2**: Mzuzu City, Zomba City, Dedza, Mwanza, Karonga, Mchinji, Ntcheu, Chitipa, Mulanje
  - Areas have high volume of travelers to China and other high risk countries compared to category 3 and they have ground crossings through which travelers form affected areas

### 2.5. Risk Classification

Three distinct categories are described depending on their risk level. The risk level is based on the presence of international airport and the volumes of people travelling from the very high risk transmission areas.
At the Point of Entry, four pathways are envisioned to play out and will determine the risk of disease importation and the response to prevent it. The pathways are based on a travel advisory that has been arrived at based on the cumulative number of cases (700 or more confirmed cases); the local transmission rate measured by number of new cases in 24 hours (cut off of 100 or more new cases). Any traveler from a country meeting these criteria will be subject to 14 days self-quarantine. The possible pathways have been classified as below and are subject to change and revision depending on the evolution of the disease and the epidemiological discoveries.

- **Pathway 1**: No travel history to country with confirmed COVID-19 cases, no symptoms – no further follow up; collection of contact information in case fellow traveler develops disease

- **Pathway 2**: Travel history to affected country meeting the travel advisory criteria, but no symptoms – Self quarantine and follow up for 14 days. Advised to contact health officials if they develop symptoms.

- **Pathway 3**: Has travel history to any COVID-19 affected country with symptoms – Immediate quarantine, conduct investigations to confirm or rule out novel Coronavirus

- **Pathway 4**: No travel history but some symptoms – isolated for further investigation to demonstrate any epidemiological link or travel links, and determine cause of symptoms.

### 2.6. National Emergency Response Capacity Analysis

The Disaster Preparedness and Relief Act of 1991 was enacted by Parliament to make provision for the coordination and implementation of measures to address the effects of disasters. It included the establishment of a National Disaster Appeal Fund (NDAF) and the National Disaster Preparedness and Relief Committee (NDPRC) to assist with policy guidance and the National Disaster Preparedness and Relief Technical Committee (NDPRTC) to work on technical issues.

Government institutions at the national and district level face many challenges, including the following:

- Scarce financial resources for maintenance of existing disaster response structures and to ensure effective emergency response;
• Inadequate Early Warning and Surveillance Systems for many disasters including disease outbreaks;
• Inadequate transport and communication facilities impeding dissemination of early warning messages, rapid assessments, verifications and emergency response;
• Inadequate capacity (human, technical, material and financial) for coordination at both national and district levels which negatively impact timely and effective assessment, response and information management during disasters;
• Inadequate cross border coordination at both national and district level;

The following capacity areas and gaps are being highlighted for effective COVID-19 preparedness and response.

2.6.1. Points of Entry
All the 10 main points of entry have port health workers who can be trained to conduct screening services. Kamuzu and Chileka Airports have quarantine facilities, however, the main challenge is lack of space/holding rooms for suspected cases and office for port health workers. In addition, most of the crossings are impacted by Porous informal long borders which undermines the impact of the health services provided at the formal ground crossings.

2.6.2. Infectious Disease Treatment Centres
As part of preparedness to 2014 Ebola Virus Disease (EVD) outbreak in West Africa, with financial support from World Bank, the country built 6 Infectious Disease Treatment Centres (IDTCs) in Karonga, Mzuzu, Dedza, Mchinji, Blantyre and Mwanza whereas Lilongwe IDTC is yet to be completed. These IDTCs have been assessed and there is need to renovate, refurbish and equip them with standard and advanced medical kits.

2.6.3. Capacity for Coronavirus case management
In districts where IDTCs were built, health care workers were trained on highly infectious disease case management, with a focus on Ebola. The training was conducted in 2019 and most of these health workers will only need orientation to the specifics of coronavirus disease such as respiratory support, IPC precautions and specimen collection. A need was identified during simulation exercise to test the Ebola Preparedness and Response Plan. There is a need to have core teams that are committed and motivated to work in environment of highly infectious diseases. We see this need being re-echoed in the corona virus threat. These teams will lead in serving all district including those without IDTCs that were not targeted for trainings.

2.6.4. Coronavirus materials
Funding is required to procure and distribute IPC materials, drugs, supplies and medical equipment for prevention, investigation and management of novel coronavirus cases. Some PPEs and other materials procured from UNICEF were distributed to 10 EVD priority districts in the country in 2019. Currently, stock status is being updated for priority districts and the districts that did not receive the materials.
2.6.5. Coronavirus Surveillance Activities

As part of preparedness, the country has intensified screening and surveillance at PoE where travelers from very high risk areas are identified and monitored for 14 days. There are limited quarantine facilities for these travelers hence the self-quarantine option in their homes was opted for. However, resources to maintain daily visits to clients and to ensure compliance of IPC and mobility rules for the travelers under surveillance are inadequate.
3.0 IMPLEMENTATION, COORDINATION, COMMUNICATION AND MONITORING ARRANGEMENTS

This section provides a summary of how implementation, coordination, communication and monitoring of emergency activities will be carried out.

3.1 Implementation Arrangements

The Special Cabinet Minister’s Committee on COVID-19 is the high level coordination structure overseeing cross-Government preparedness and response activities of the COVID-19 outbreak. The National Disaster Preparedness and Relief Committee (NDPRC) chaired by the Chief Secretary to Government comprising of Permanent Secretaries from all government ministries will provide policy guidance and leadership in implementation of the plan. The Humanitarian response Committee composed of directors of government departments and heads of humanitarian partners, NGOs and CSOs will provide technical support and advice to the NDPRC in implementation of the plan. The Ministry of Disaster Management Affairs and Public Events and the UNRCO are responsible for facilitating resource mobilization, effective and efficient implementation of COVID-19 preparedness and response for UN- Agencies and development partners through the Humanitarian Country Team (HCT).

The Ministry of Health is the technical lead institution for implementing COVID-19 preparedness and response activities and will provide all the necessary technical support and expertise.

</tbody>
</table>

At the health ministerial level, a multi-sectoral Health Cluster Committee reviews and endorses the decisions provided by the Health Emergency Technical Committee (HETC). Both Committees include bilateral and multilateral partners such as WHO, UNICEF, FAO, USAID, CDC, both at local and international level and meet weekly to coordinate preparedness and response.

---

UNHCR should co-lead the Protection cluster; however, UNHCR Malawi indicated that it does not have the capacity at the local level to provide support to the cluster. In the event of a major emergency, UNCHR will assume its global responsibilities and provide leadership to the cluster in support of UNICEF.
A taskforce on COVID-19 is responsible for developing the technical guidelines, interventions, preparedness plans and budget as well as ensuring operational readiness for any COVID-19 outbreak. The taskforce sits at the Public Health Institute of Malawi (PHIM) and feeds into the HETC and Health Cluster Committees.

An Incident Management System has been set up at PHIM to ensure efficient coordination of activities with the following functions:

- **Health Operations and Technical Expertise**
  - Surveillance, Laboratory, PoE, IPC, WASH, Case Management, Risk Communication
- **Partner Coordination**
  - Resource mobilization, including technical and financial
- **Logistics and Supplies**
  - Health Procurement and Inventory, Operational Support
- **Planning and Information**
  - Surveillance and Early Warning, Monitoring and Evaluation,
- **Administration and Finance**
  - Human Resource, Financial Management

At the district level, similar structures of from the health cluster down are replicated.

### 3.2 Coordination mechanism

The Office of the President and Cabinet set up a Special Cabinet Minister’s Committee on COVID-19 on 7th March, 2020 as high level coordination structure overseeing cross-Government preparedness and response activities of the COVID-19 outbreak. The committee comprises the following Ministries: Health (Chairperson); Disaster Management Affairs and Public Events; Minister of Finance and Economic Planning; Education Science and Technology; Homeland Security; Defence; Industry, Trade and Tourism; Agriculture, Irrigation and Water Development; Foreign Affairs and International Cooperation.

The National Disaster Preparedness and Relief Committee (NDPRC) chaired by the Chief Secretary to Government comprising of Permanent Secretaries from relevant ministries will provide policy guidance and leadership in implementation of the plan.

The National Disaster Preparedness and Relief Technical Committee will provide technical support and advice to the NDPRC in implementation of the plan.

The office of the UN Resident Coordinator (UNRCO) is responsible for facilitating resource mobilization, effective and efficient implementation of COVID-19 preparedness and response for UN- Agencies and development partners through the Humanitarian Country Team (HCT).

### 3.3 Communication and Information Management

Effective communication and information management is crucial in implementation of the Plan. Government has set up a special task force of Principal Secretaries chaired by Secretary for Health to lead in communication to the public through regular press conferences and updates.
This plan has also established a communication sub-cluster to spearhead proper messaging and communication on the Covid-19. Key to the sub-cluster would be the development and implementation of the COVID-19 Communication Plan.

3.4 Monitoring and Evaluation
Government, in collaboration with the activated clusters and its humanitarian partners, will closely monitor the situation and interventions to ensure progress and accountability. Cluster leads and co-leads in the relevant areas of interventions, will provide technical, coordination and leadership support to guide and prioritize interventions.

Strategic and cluster objectives have been developed around the priorities. In order to measure cluster objective, various clusters identified a set of priority activities. The clusters will regularly monitor their implementation using matrix provided in annexes of this plan.
Coordination Structure

Figure 1: Coordination Structure
4.0. CLUSTER PREPAREDNESS, RESPONSE AND EARLY RECOVERY PLANS

4.1. INTER-CLUSTER COORDINATION AND ASSESSMENT
The DoDMA leads the Co-ordination, Communication and Assessment operation for preparedness, emergency response and recovery while the UNRCO co-leads.

4.1.1. Overall Objective
To facilitate appropriate coordination arrangements and communication between Government, UN, and NGOs including MRCS in responding to emergencies and during Preparedness and Response planning process.

4.1.2. Specific Objectives
i. To strengthen coordination between government, the UN and NGOs for disaster preparedness, response and recovery efforts at national and local levels;
ii. To support coordination at Local Authority level (District, Town, Municipal and City)
iii. To coordinate joint resource mobilization effort.

4.1.3. Emergency Preparedness and Capacity-Building Activities

</tbody>
</table>
4.1.6. Operational Constraints
- Inconsistency representation/participation of cluster leads. DoDMA should engage line ministries to designate a permanent cluster lead during emergency response.
- Limited human resource and financial capacity to organize medium- to large-scale response to disaster;
- Inadequate information/communication systems in some District Councils, including limited access to computers and internet.

4.1.7. Primary Stakeholders Roles and Responsibilities
- Overall emergency response coordination is led by DoDMA assisted by the relevant line ministries, NGOs, UN agencies and inter-agency coordination mechanisms. Ministry of Health is the technical lead for implementation of the plan. District Commissioners are mandated to coordinate any emergency-related activity in their respective districts through the relevant structures with support from UN agencies and NGOs.

4.1.8. Collaborative Partners
DoDMA, relevant line ministries (Local Government and Education), District councils, UNRCO and other UN agencies, relevant NGOs

4.2. PUBLIC COMMUNICATION CLUSTER
The Ministry of Information, Civic Education and Communications Technology will lead the Public Communication Cluster in collaboration with the Ministry of Health, Ministry of Disaster Management Affairs and Public Events, WHO, UNICEF and other agencies. Under this cluster, a national Covid-19 communication plan has been developed to guide the communication needs of the preparedness and response plan.

4.2.1. Cluster Objective
To enhance information flow amongst all stakeholders and the general public on Covid-19.

4.2.2. Specific Objectives
The following are the specific objectives of the Malawi National Covid-19 Communication Plan.
   a. Provide timely and accurate communication which will among other things, counter spread of fake news on Covid-19
b. Raise awareness amongst stakeholders and the general public on COVID-19 and encourage them to observe recommended measures for containing the pandemic

c. Equip and empower communication front-line workers with knowledge on Covid-19

d. Coordinate and monitor the implementation of communication interventions for all Covid-19 stakeholders

e. Fight stigma against suspected Covid-19 cases and promote solidarity among the general population

4.2.3. Target population
The communication plan targets all stakeholders and the general public. These include: The Media, MDA’s Donor community, the clergy, traditional leaders, etc.

4.2.4 Risk communication and community engagement
The plan will reach out and engage the target population through the following means;
  a. Orientation sessions
  b. Development of tailor-made messages for specific publics
  c. Timely Media briefings
  d. Press releases
  e. Public announcements
  f. Development and distribution of IEC materials
  g. Radio and TV programmes/jingles
  h. Online Presence (social media/ websites)
  i. Development of a national communication plan for Covid-19
  j. Celebrity and opinion leader’s endorsements

4.2.5 Planned activities for the implementation of the communication plan
The following table (table 1) indicates activities that will be implemented under the communication plan:

4.2.8. Operational Constraints
The major operational constraint in the implementation of the plan is unavailability of resources. The cluster will engage all stakeholders in mobilizing resources for the implementation of the activities.

4.2.9. Primary Stakeholder Roles and Responsibilities
Cluster stakeholders include government MDAs whose role will be providing the technical guidance in the implementation of the activities. Other stakeholders include donor and humanitarian partners who will provide resources for the implementation of the activities.

4.3. HEALTH CLUSTER
The Ministry of Health leads the Health Cluster while the WHO co-leads.

4.3.1. Main Objective
The main objective of this COVID-19 Plan is to prevent, rapidly detect and effectively respond to any COVID-19 outbreak to reduce morbidity and mortality in the country.

4.3.2. Specific objectives
The specific objectives include:

i. Enhance Coordination and Leadership for COVID-19 preparedness and response
ii. To raise public awareness and community engagement in all districts
iii. To strengthen surveillance and Screening at Points of Entry
iv. To strengthen Laboratory Capacity to detect COVID-19
v. To build capacity of Health Care Workers on Highly Infectious Diseases - COVID-19
vi. To Equip quarantine units
vii. To finalize and equip the Infectious disease treatment centres (ITCs) and assess their readiness
viii. To mobilize Coronavirus supplies, equipment and pre-position them.
ix. To conduct simulation exercises to test and improve the Preparedness and Response Plan

**4.4. WASH CLUSTER**

The Ministry of Irrigation and Water Development leads the WaSH Cluster and is co-led by UNICEF

**4.4.1. Overall Cluster Objective**

The overall objective of the WaSH cluster program is to contribute to the reduction of morbidity and mortality caused by Coronavirus through providing timely and appropriate preventive and response WaSH services / activities in districts that are affected by and are at risk of Corona outbreak.
4.4.2. **Specific Objectives**

i. To provide safe water supply in adequate quantities to affected population in Emergency Treatment Units and other transit centres and surrounding communities.

ii. To provide gender responsive sanitation and hygiene facilities in emergency treatment units and other transit centres for Corona affected populations

iii. To promote hand washing with soap in collaboration with C4D firms, departments, units

iv. To ensure a coordinated WaSH response to the Corona virus outbreak with other service providers at national, district and sub district levels – particularly with our health colleagues to avoid duplication of effort; contradictions and for leveraging of use of resources,

v. To ensure effective Information management and sharing about the WaSH response to the Corona outbreak.

vi. To preposition adequate Health and WaSH supplies to respond to perceived outbreaks of Coronavirus.

4.4.3. **Target population**

The WaSH cluster will target a population of up to 30,000 people and a case load of 10,000 positive cases with WASH services for the prevention of the spread of coronavirus outbreak.

4.4.4. **Covid-19 risks to the cluster**

The following are the risks associate with the WaSH cluster

i. The greatest risk is limited resources to prevent huge number of people being affected

ii. Other risks include lack of proper and adequate protection of health and other frontline workers involved in promoting WaSH

iii. High illiteracy, poverty and mere naivety that goes with these; preventing uptake of WASH related messages.

4.4.5. **Risk communication and community engagement**

Community mobilization for the cluster to reach out and engage the target population will be done through the following:

i. Engaging District WaSH and Health teams in WaSH service delivery

ii. Working with Community leaders, Religious and Councilors at TA and village levels

iii. Conducting Mass Hygiene Campaigns in collaboration with C4D partners

4.4.6. **Covid-19 Emergency Preparedness and Capacity-Building Activities**

</tbody>
</table>
4.4.10. Operational Constraints
- Inadequate resources to respond to corona virus outbreak. However, implementing partners will embark upon resource mobilization efforts.
- The geographical spread of the outbreak may surpass the current capacity of WASH IP’s to respond effectively. However, better coordination, collaboration and leveraging will result into a more effective response.

4.4.11. Primary Stakeholder Roles and Responsibilities
i. Ministry of Agriculture, Irrigation and Water Development as a cluster lead will play a leadership and coordination role assisted by UNICEF who are the cluster co-lead
ii. WASH CSO’s will support government in direct implementation of activities
iii. Private sector will also be contracted to undertake speedy implementation of some contractual serviced
iv. District WASH teams with their frontline workers will monitor and support activities on the ground

4.4.12. Collaborative Partners
The Cluster will collaborate with other cluster especially the Health Cluster, the Medea, the private sectors and communities.

4.5. PROTECTION CLUSTER

4.5.1. Overall Cluster Objective
To reduce protection threats for affected populations, and to protect all vulnerable groups from violence, exploitation, abuse and neglect during disasters and ensure that human rights are respected.

4.5.2. Specific Objectives
To prevent and address the secondary impact of the COVID-19 outbreak through coordination and support to:
   i. Mental health and psychosocial support (MHPSS) and stigma prevention for all affected populations
   ii. Continue social services including child protection services for children quarantined or left without care provider
iii. Social protection services for economically vulnerable households affected by COVID-19
iv. Risk mitigation of gender-based violence and all forms of violence, abuse, exploitation and neglect, including the risks for people in isolation and quarantine
v. Prevent separation of children from caregivers.
vi. Advocate for inclusion of specific rights, needs and vulnerabilities of women, girls, and children, including the persons with disabilities and elderly in prevention, early detection, care and treatment strategies and programmes implemented by other clusters.

4.5.3. Target population
The plan targets populations and families affected by the outbreak of COVID-19 both health-wise and economically, especially those marginalized and vulnerable, including children, women, elderly, people with disabilities, children in institutions, people with HIV/AIDS and chronically ill, and those in hard-to-reach locations or with poor access to services. An expanded Malawi National Social Cash Transfer Programme (SCTP) will target the vulnerable households both in rural and urban areas, including but not limited to the current SCTP households. Moreover, there will be need for a strategy to address limited possibility to spend the cash, for example, if markets are closed, particularly in high infection areas or if there is a lockdown in an urban area.

4.5.4. Risk communication and community engagement (Outline how the cluster will reach out and engage the target population)
Harmonize complaint and feedback mechanism to enable people to report any concerns. Public messaging will be done through mass media, social media, and other platforms minimizing need for persons to gather in close proximity.

4.5.5. Covid-19 Emergency Preparedness and Capacity-Building Activities

</tbody>
</table>
4.5.9. Operational Constraints

i. Availability of the national capacity in mental health will be challenging.

ii. Restriction of travels and low internet penetration may hamper capacity building efforts.

Social Protection

i. Challenge with targeting of potential beneficiaries in the urban areas:
   a. [to address the challenge] Engage with Block Leaders to identify the most needy households in their localities. Identified households to be verified through a quick data collection and be subjected to a Proxy Means Test (PMT)

ii. Challenge with delivery of transfers during the full blown phase of the disease:
   a. [to address the challenge] Subcontract transfer delivery to mobile money service providers

iii. Shortage of ICT equipment (bar code scanners, laptops and webcams) for enrolment and disbursement of transfers:
   a. [to address the challenge] Procure additional ICT equipment for smooth implementation of VE and HE

4.5.10. Primary Stakeholder Roles and Responsibilities

The Protection Cluster is led by the MoGCDSW and co-led by UNICEF. Both will operate as coordinating agencies with equal tasks and responsibilities. The Gender-Based Violence Sub-Cluster is led by the MoGCDSW and co-led by the United Nations Population Fund (UNFPA). As required, a Child Protection Sub-Cluster will be activated and co-led by UNICEF.

Social Protection

i. Ministry of Population Planning and Social Welfare (MPPSW): Coordinate prevention measures at SCTP pay points; Coordinate implementation of VE and HE by district and city councils

ii. Ministry of Finance (Department of Poverty Reduction and Social Protection): Completion of Unified Beneficiary Registry (UBR) processes in the 8 districts pending the same; Monitor implementation of VE and HE

iii. Ministry of Gender, Child and Community Development: Monitor implementation of the cluster activities from the gender perspective

4.5.11. Additional Material and Financial Requirements
Protection Cluster Coordinator and Information Management Specialist will be required during response.

4.5.12. Collaborative Partners

4.6. EMPLOYMENT AND LABOUR FORCE PROTECTION

4.6.1. Overall Cluster Objective
To develop and protect the labour force through enhancement of labour Relations; Occupational Safety, Health and Welfare; worker’s compensation services and skills development in the wake of COVID-19 pandemic as it impacts the workplace.

4.6.2. Specific Objectives
i. To protect jobs,
ii. To protect vulnerable workers
iii. To promote safety and health at work
iv. To promote people’s capabilities through skilling, reskilling and up skilling
v. To accelerate setting up of workers compensation fund

4.6.3. Target population
Employers, workers, job seekers and laid off workers both in formal and informal economy

4.6.4. Covid-19 risks to the cluster
The ILO estimates that up to 25 million people could become unemployed due to COVID-19 globally. Enterprises of different sizes will be stop operating, cut off operations and lay off workers. So far the Ministry has received a number of notifications of retrenchments particularly from hospitality and aviation sectors. Already, the aviation is on the verge of collapse as it has issued an official statement on flight cancellation of all carriers expect those carrying cargo and personnel under the category of emergency services. Many workers, particularly those in lower positions, are losing or are likely to lose their jobs. In Malawi, the
unemployed are not eligible for unemployment benefits. Casual workers, day laborers and informal traders will not be spared. They will have no means to ensure that they have food on the table. In the long term cycles of poverty and inequality will drastically increase. Overcrowding of some workplaces also poses a risk of accelerating workplace transmission of COVID-19.

4.6.4. Risk communication and community engagement
The cluster will reach out and engage the target population through its tripartite machinery that involving government, employers and workers. The cluster will utilize the existing communication structures such as safety and health committees and trade unions to include in the communication content issues of CONVID-19. The cluster will employ work specific information, education and communication materials to communicate issues of CONVID-19. The cluster will use workshops, press release, and other avenues to engage the clients on CONVID-19. The cluster will also develop workplace specific guidelines.

**4.6.9. Operational Constraints**

i. Inadequate vehicles  
ii. Inadequate staff  
iii. Lack of ICT infrastructure

**4.6.10. Primary Stakeholder Roles and Responsibilities**

Employers:  
i. To provide safe working environment  
ii. Train their employees on safety and health issues for the workplace

Workers:  
i. To comply with safety and health standards at the workplace  
ii. To conduct workers education (Trade Unions)
iii. To advocate for safety and health facilities
iv. Advocate for affirmative action for vulnerable workers

Ministry of Health
i. Provide policy direction on COVID-19
ii. To provide training on COVID-19

ILO
i. To provide technical assistance
ii. To provide global policy direction on COVID-19 in the workplace

4.6.11. Additional Material and Financial Requirements
Personal protective equipment to the tune of 20,000 United States Dollars

4.6.12. Collaborative Partners
List down partners the cluster collaborates with
ILO, ECAM, MCTU, MCCCCI, MoH, COM, MBS,

4.7. EDUCATION CLUSTER
The Ministry of Education, Science and Technology (MoEST) is the cluster lead while UNICEF and Save the Children are co-leads

4.7.1. Overall Cluster Objective
The Education Cluster will ensure that teaching and learning continues through innovative solutions and creating an enabling environment in communities with special attention given to orphans and vulnerable children in the school-going age groups. As schools remain closed, interventions will focus on reaching out to school-going learners at home and preparing for reopening.

4.7.2. Specific Objectives
i. **Coordination and communication:** To strengthen coordination with other clusters (Health, Protection, and WASH clusters) and within the cluster (national – district – school levels) in COVID-19 case management.
ii. **Awareness raising, behaviour changes and capacity building:** To intensify awareness raising and behaviour changes for prevention and management of COVID-19 amongst teachers, learners and communities.
iii. **Safety and decongestions (when schools are open):** To promote safety of learners and teachers.
iv. **Continuous learning (when schools are closed):** To ensure continuity of teaching and learning during the possible closure of schools.

---

5Vulnerable groups could be members of the education community with underlying health conditions, e.g. HIV/Aids, or children who live physically close to the other members in the village community, or education community members who are sharing rooms, e.g. in student hostels in Teacher Training Colleges, boarding schools
4.7.3. Target population
i. ECD: 17,465 children from ECD and preschools.
ii. Primary School: 6,361 primary schools with the enrolment of 5,303,188 learners (girls: 2,677,650 and boys: 2,625,538)
iii. Secondary School: 1,452 secondary schools with the enrolment of 379,025 learners
iv. Higher education: 34,924 students are currently studying at higher education institutions
v. Teachers/Lecturers: All teachers and lectures in public learning institutions

4.7.4. Risk communication and community engagement
i. Ministerial Circular on COVID-19 school response guidelines
ii. Mass media including community radio, Public Address system and interactive radio drama (TfaC)
iii. Information Education and Communication (IEC) materials – material development and printing.
iv. E-messages in collaboration with telecommunication companies (MoEST to engage service providers)
v. Home schooling including e-learning
vi. Psychosocial support- dealing with misconceptions on COVID-19

4.7.9. Operational Constraints

i. Adjusting to new ways of working (i.e. through technology) given the poor connectivity in some parts of the country

ii. Availability funding – Current funding is tied to the 2019 flood response. Partners are exploring the possibilities of re-programming.

4.7.10. Collaborative Partners

- MoEST, Save the Children, UNICEF, World Vision, GIZ, USAID, DFID, Action Aid, CSEC, Mary’s Meals, WFP, UNHCR, KFW, DAPP, Concern Worldwide, UNESCO, Tfac, Educans, Plan International

4.8. SECURITY AND ENFORCEMENT CLUSTER

4.8.1. DEPARTMENT OF IMMIGRATION AND CITIZENSHIP SERVICES

4.8.1.1 Overall Cluster Objective
To execute pro-active coronavirus operation while executing its mandate of managing people entering and exiting the country taking into cognisance that the transmission of the coronavirus is accelerated through mobility of people.

4.8.1.2. Specific Objectives
- To strengthen screening of people entering Malawi at the port of entry in liaison with port health officials
- To conduct border patrols to counter illegal entry to subject the culprits to thorough screening by health officials
- To mount permanent and temporary roadblocks where health officials will also be present for screening purposes
- To suspend issuance of border passes and visas in order to minimize cross border activities
- To procure operation vehicles and sanitization items
4.8.1.3. Target population
The target population comprises the officers, the travelling community and the population in the border districts.

4.8.1.4. Covid-19 risks to the cluster
The trend on corona virus has demonstrated that the transmission of the virus is accelerated through mobility of people. As of 25th March 2020 there were 709 confirmed cases of corona virus in South Africa. Considering the volume of traffic from Malawi to South Africa and from South Africa to Malawi it immediately presents the adverse security risk on national security. We envisage public panic and chaos when a case is reported in Malawi threatening national security.

4.8.1.5. Risk communication and community engagement
Public awareness campaigns targeting the community around our porous borders to report to the security agents any suspected irregular movements of people across the borders. The chiefs in the communities will be engaged to encourage their people to work with the security institutions to fight against the spread of the virus. Emphasis will be made on the risk to the community if the activities are left unchecked.

Resource constraints i.e. financial and materials

4.8.1.9. Primary Stakeholder Roles and Responsibilities
Department of Immigration and Citizenship Services, Malawi Police Service, Malawi Defence Force. The major activity for the stakeholders in this cluster is enforcement of the guiding policies in place.

4.8.1.10. Additional Material and Financial Requirements
Protective equipment i.e. cloud control equipment and firearms in cases of violence which might endanger life of the officers.

4.8.1.11. Collaborative Partners
Malawi Police Service, Ministry of Health, Malawi Revenue Authority and all other relevant stakeholders taking

4.8.2. MALAWI POLICE SERVICE

4.8.2.1. Overall Cluster Objective
To enhance the Malawi Police Service Preparedness to COVID-19 through resource and knowledge mobilization that will enable its comprehensive response to the pandemic.

4.8.2.2. Specific Objectives
To ensure:

i. All police officers are well informed and trained about the pandemic including their role in prevention and aiding treatment through provision of information and communication material, awareness and training programs.

ii. Administrative arrangement to curb the spread of the outbreak among the officers, the detained suspects and those seeking their service or across these groups are put in place

iii. The required supplies (such as water, disinfectants and personal protective gear) are available and properly used by all.

iv. Availability of reliable, safe and timely logistical systems and transportation through addition vehicles and liaison offices.

v. Efficient and effective communication and coordination between the Malawi Police Service and the district/national response team is implemented through establishment of focal persons and communication systems.

vi. Continuous monitoring of all the policies and strategies across the country.

4.8.2.3. Target population

Police Officers and general population

4.8.2.4. Covid-19 risks to the cluster

i. Public disorder

ii. Public non-compliance

iii. Inability to maintain containment

iv. Food shortages

v. Inadequate Morgues/Mortuary space

vi. Loss of key personnel due to infection

vii. Absenteeism

viii. Collapse of government systems

ix. Failure of critical infrastructure

x. Inadequate legal frameworks permitting action

xi. Opportunistic criminal activities due economic impact

xii. Prolonged recovery plan

xiii. Injuries to the public and police officers

xiv. Congestion in police cells

xv. Long and porous borders

4.8.2.5. Communication and community engagement

i. Mass sensitization

ii. Training of community policing volunteers. The information to include the following: Restriction of movement and gatherings, Evoking of the section 46 of disaster management act, Fake messages, Handling of scene of crimes and Restriction on the use of unchartered routes

iii. Establishment of focal persons

### 4.8.2.10. Operational Constraints

Poor Police - population relationship

### 4.8.2.11. Primary Stakeholder Roles and Responsibilities

i. Ministry of Health – to provide technical support

ii. Malawi Defence Force – to beef up security in times need

iii. Immigration – complement border security

### 4.8.3. MALAWI DEFENCE FORCE BUDGET FOR COVID – 19

#### 4.8.3.1. Overall Cluster Objective

The main objective of this Preparedness and Response Plan is to prevent the spread Covid-19 disease in Malawi.

#### 4.8.3.2. Specific Objectives

The specific objectives include:

i. To assist in enforcement of lockdown of selected areas, districts or entire country.

ii. To assist in control of illegal movement of people through border patrols.

iii. To assist in delivery of humanitarian aid.

iv. To provide security in treatment centres.

v. To build capacity of all health care workers (HCW) in all MDF camp hospitals.

vi. To raise awareness and engagement through orientations sessions with all MDF service members, their spouses, dependents and members of the communities surrounding all military cantonments.

vii. To strengthen Covid-19 disease surveillance/screening in all MDF sites and case management.

viii. To mobilize Covid-19 supplies, equipment and pre-position them.
4.8.3.3. Target population
The targeted population is in two categories. The first category is HCWs in all MDF camp hospitals. The second category comprises of MDF service members, their spouses, dependents and members of the community surrounding military cantonments.

4.8.3.4. Covid-19 risks to the cluster
HCWs in all MDF camp hospitals are at risk of acquiring Covid-19 disease through follow up, contact tracing and case management. The service members who will be involved in various Covid-19 operations like lockdown and border patrols are also at risk of contracting the virus.

4.8.3.5. Risk communication and community engagement
The targeted population will be reached through lectures, sensitization meetings, company baraza, muster parades, padre hours, military leaflets and posters.

4.8.3.6. Covid-19 Emergency Preparedness and Capacity-Building Activities

MDF TOTAL |  | 672,202.16 | - | 672,202.16 |

4.8.3.9. Operational Constraints

There is usually a delay in release of funds for the operations. Ministry of disaster management and Public Events will, therefore, be engaged as early as possible to prevent the administrative delays.

4.8.3.10. Primary Stakeholder Roles and Responsibilities

**MDF:**

i. To assist in enforcement of lockdown of selected areas, districts or entire country.

ii. To assist in control of illegal movement of people through border patrols.

iii. To assist in delivery of humanitarian aid.

iv. To provide security in treatment centres.

4.8.3.11. Collaborative Partners

MPS, Department of Immigration, Malawi Prison Services
4.9. FOOD SECURITY CLUSTER
The Ministry of Disaster Management Affairs through the Department of Disaster Management Affairs (DoDMA) leads the Food Security Cluster while WFP co-leads.

4.9.1. Main Objective
To provide live saving food assistance to food insecure urban, semi-urban and rural households affected by the impact of COVID-19

4.9.2. Specific Objective
i. To provide lifesaving food assistance to people affected by the economic shock consequent to Covid-19 outbreak.
ii. To minimise negative or risky coping mechanisms for affected communities and households that may lead to increasing the risk of COVID-19 infections.

4.9.3. Target population
i. Urban and semi-urban poor households that are likely to be affected by the impact of COVID–19.
ii. Rural food insecure populations that may be affected by limited availability of casual labour and food commodities on local markets as result of COVID–19 outbreak.

4.9.4. Risk communication and community engagement
i. Mass media including community radio (Farm Radio Trust) and interactive radio drama (TfaC).
ii. Information Education and Communication (IEC) materials – material development and printing for distributions.
iii. Mobile van announcements where applicable.

4.9.5. Covid-19 Emergency Preparedness and Capacity-Building Activities

### 4.9.6. Covid-19 Response Activities
4.9.7. Operational Constraints
   i. Adjusting to new ways of remote working
   ii. Availability of new funding and possibilities of re-programming existing resources (flexibility)
   iii. Precautionary measures including extensive hand-washing, and social distancing (small groups, etc.) during all beneficiary engagement sessions including distributions, are operationally difficult in a context of a rapid and massive response.

4.9.8. Primary Stakeholder Roles and Responsibilities
   i. DoDMA facilitates and implement the activities.
   ii. WFP supports DoDMA in implementation and advocacy
   iii. Cooperating Partners, Financial Service Providers are in charge of distributions
   v. WFP will leverage its core expertise in logistics/supply chain as well as in food security analysis and response to inform targeting, modality triggers and selection, distribution processes, overall market analyses and programme monitoring to provide technical assistance to the Government of Malawi and other development partners.

4.9.9. Collaborative Partners
   i. Private sector and Government’s Agencies (SGR, ADMARC)
   ii. Media houses, Mobile network companies, donor community.

4.10. TRANSPORT AND LOGISTICS CLUSTER
The Transport and Logistics cluster is led by Ministry of Transport and Public Works and co-led by World Food Program

4.10.1. Overall Cluster Objective
To provide relevant logistics and operational support to the humanitarian community and relevant stakeholders involved in COVID-19 preparedness and response activities

4.10.2. Specific Objectives
   i. To procure and preposition COVID-19 supplies and equipment as required
   ii. To provide dedicated and timely COVID-19 logistics coordination and services including storage, transportation and engineering/light construction
   iii. To advocate through the relevant authorities for minimal disruption and impact to the humanitarian supply chain in light of the COVID-19 threat
4.10.3. Target population
As a service-based cluster and key enabler of the humanitarian response, targeting is not done based on a population but rather all clusters, the humanitarian community (UN, NGOs and International Organisations) and, relevant government entities among other key COVID-19 agencies are expected to be supported.

4.10.4. Covid-19 risks to the cluster
i. Global disruptions to the medical and humanitarian supply chain could lead to delays in sourcing, procurement and transport.
ii. Border closures and travel restrictions could also cause delays with the procurement of critical items and/or entry of experts involved in national logistics readiness efforts.
iii. Hikes in transporter and supplier fares may be experienced based on the response scenarios.
iv. Containment measures might impact the availability of logistics staff movement and flow of essential COVID-19 relief items.

4.10.5. Risk communication and community engagement
i. The cluster will maintain heavy inter-cluster engagement on the logistics and operations gaps and priority needs
ii. Dedicated logistics coordination and staffing support will remain available (upon request) to augment technical logistics capacity
iii. Where applicable, table top and/or simulation exercises will be carried out to stress test the efficiency of the National Logistics Cluster response plan

4.10.10. Operational Constraints

i. As witnessed across the region, confirmed cases have led to restrictions in movement of goods and personnel (labour). While humanitarian goods in Malawi as considered exempt, delays in delivery of goods due to increased measures such as sanitation at ports, inspection of emergency goods and the presence of checkpoint may pose a challenge to the cluster.
ii. The is a risk of depleting stocks of essential items in Malawi such as food, medicines, fuel and other relief items due to restricted movement and trade.

iii. Potential price increases and the economic impact on business could result in higher logistics operational costs.

iv. Closed borders have resulted in reduced aviation capacity i.e. cancelled commercial passenger and cargo flights. Depending how widespread the outbreak is, there might be a need to for increased humanitarian passenger and cargo airlift capacity to fill the gap.

v. In case transporters, suppliers or implementing partners record confirmed cases, disruptions to the supply chain are envisaged

To mitigate the constraints highlighted, constant engagement with authorities for smooth and rapid clearance of humanitarian supplies and the logistics labour force will be undertaken. In addition, in line with information management activities, supply chain intelligence including price and stock monitoring, transporter and supplier business continuity among other steps will be used to guide operations and reduce lead times. Staff will also be equipped with PPEs where necessary to avoid any potential spread of the disease.

4.10.11. Primary Stakeholder Roles and Responsibilities

i. **Government** – MoH and DoDMA will be leading the national coordination and response. MoTPW and Civil Aviation will be key responsible entities for the overall logistics leadership and some implementation activities.

ii. **WFP** – as co-lead of the National Logistics Cluster will support the Government in logistics and operation strategy development, adaption of plans and technical coordination/implementation of activities and services on behalf of the humanitarian community.

4.10.12. Collaborative Partners

Ministry of Transport and Public Works, Department of Disaster Management Affairs (DoDMA), Department of Civil Aviation, World Health Organisation (WHO), World Food Programme (WFP), UNICEF, Malawi Red Cross Society, Inter-cluster coordination group, Malawi Police Services, Malawi Defence Force, Municipal/City /District Councils and I/NGOs.

</table>
Mechanism for sample referral to other WHO collaborating centres in place (the first 10 positive and five negative samples can be shipped immediately to the referral centre identified)

The Priority POEs are identified based on agreed criteria

adaptation of the travelers screening form and screening of travelers (24/7)

Rapid assessment conducted to identify gaps

Identified gaps are included in the national preparedness plan

SOPs and flow charts are developed/adapted and made available and used at the POEs

Additional HR deployed to address critical gaps at POEs

Training and orientation of staff at POEs

Regular supervisions and monitoring at POEs

Minimum stock of PPE secured at POEs

Screening area and a room for patient assessment available with adequate equipment and supplies

Capacity to isolate suspected cases available in all POEs

Ambulance to transport the suspected case available in all POEs

An electronic system to document and analyze information from the screening is up and running
