The map is only intended to display the physical condition of the roads based on the best information available at the time of publication. It does not address access issues related to factors other than the actual physical condition of the road itself. It does not reflect the political situation, or address security issues.

As the rainy season continues in South Sudan, the length of which varies according to latitude and is generally no more than eight to nine months a year, beginning in March and depending on the location and rainfall, the rainy season causes widespread flooding and interruption of transportation routes. Jonglei is the most affected state with 50% or more roads completely impassable until the end of rainy season.
