TROPICAL CYCLONE FREDDY

MALAWI, SOUTHERN AFRICA | 7 - 13 APRIL 2023

The Transport and Logistics Cluster (TLC) is supporting response efforts by facilitating access to common logistics services including transport and storage, in addition to information management and coordination support.

Since the beginning of April, two WFP humanitarian helicopters have been working to deliver relief items to inaccessible areas currently unreachable by road. Based on assessments from 10 April, 19% of identified camp locations for displaced people were still requiring air transport to receive assistance. Given funding constraints, air transport service will be reduced to one helicopter at the end of April; by mid-May all air transport services are scheduled to end. In addition to air transport, transportation of relief items is ongoing by boat and road where possible.

AIR TRANSPORT TO HARD-TO-REACH AREAS BY WFP AIR ASSET (IN KG)
